

Electronic Technician

If you are technically inclined, conscientious, love to work with your hands and want to work with other highly motivated self-starters in a start-up environment, keep on reading!

Global Cloud Fleet is a growing company in need of true team players with a desire to succeed. With us you will become a part of a team that takes pride in our ability to be a cutting-edge company that cares about your contributions and believes everyone has a part in our company's overall success.

Global Cloud Fleet is a leader in innovative services, high-quality manufacturing, and global sourcing of high-quality components and products, and is looking for an exceptional **Electronic Technician** to join our rapidly expanding dynamic team as we continue to improve and expand this technology.

The primary role of the **Global Cloud Fleet Electronic Technician** will be to manage the device Electronic process, from analyzing failed products through circuit diagnostics, to capturing data to determine the cause of failures, repair devices, if possible, documenting the process through testing and appropriate follow-up. The successful **Electronic Technician** will have a keen attention to detail to ensure all product testing and analysis conforms to our high-quality standards, while maintaining a timely schedule that meets our contractual obligations.

The ideal **Electronic Technician** candidate will have an associate's degree in electronics or similar, with 4+ years of experience in the high-tech field, or equivalent; a friendly and team-oriented can-do attitude, is detail oriented, experienced in basic personal computer operation and capable of effectively using standard current Windows applications (spreadsheet, word processing), is able to learn proprietary Company software, comfortable with repetitive work, and has the desire to be a part of a winning team.

The successful **Electronic Technician** will combine a positive, cooperative mindset, a high sense of integrity and work ethics, good listening skills, and the ability to speak effectively, and perform the following:

Duties and Responsibilities:

- Testing to include user interface testing, device bench testing, and road testing.
- Ensures complete and thorough documentation is entered into the incident tracking system for all defect issues found.
- During the execution of the test plan, notifies an engineer or manager if the test plan needs to be modified.
- Working with an engineer or the manager, documents test results in the appropriate test report/summary in a thorough and detailed manner.
- With the assistance of an engineer or the manager, determines the appropriate test plans to effectively verify a regression test suite.
- Provides support to other departments as necessary regarding equipment resources and re-creation of customer issues.
- Performs related duties and special projects as assigned.

Other:

- Experience with wireless devices a plus
- Ability to learn new technologies and apply learned information to job duties and responsibilities
- Basic Windows Computer Applications (spreadsheet, word processing)
- Demonstrated ability to communicate technical topics verbally and in writing
- Evidence of capable analytical and troubleshooting skills
- Ability to work with instruction from manager
- Demonstrated willingness and flexibility to take on other duties as assigned by management
- Desire to succeed with a positive, can-do attitude

Type: Full Time

Location: San Diego, UTC area

A stable work history and satisfactory background check are required of all applicants.
